A version of the AutoCAD software was released in 1985 for the Macintosh. AutoCAD R14 was initially released for the Macintosh in October 1992, and it replaced the R12 version in 1994. AutoCAD's basic purpose is to design, create, and edit geometry. It is used for creating and editing two- and three-dimensional (2D and 3D) drawings (designs). After a 2D drawing is created, it can be converted into a 3D drawing. AutoCAD also allows users to plan, view, measure, and analyze the design. The software also includes capabilities for modeling, animation, rendering, and other specialized capabilities. Like most CAD software, AutoCAD was initially only sold as a desktop application. Later it became available on laptops and tablet computers. AutoCAD is a part of the Autodesk family of software applications and complements other Autodesk software applications, including 3ds Max, Maya, and SketchUp. AutoCAD is designed primarily for use by architects, engineers, and designers. It is the primary design application of many architectural firms and design teams. AutoCAD is used in many other design disciplines as well, such as mechanical and electrical engineering, mechanical, architectural, landscape, and construction. Despite this wide range of potential users, AutoCAD is commonly referred to as a "building design" or "building tool." However, it can be used for other disciplines. For example, it can be used to create floor plans, electrical schematics, and furniture plans. AutoCAD is also used for documenting the construction process, from drawing office layouts to determining final shapes for concrete. AutoCAD is used in several other building-related industries, such as plumbing, heating, and plumbing. AutoCAD is also used to make product designs for engineering firms and in the aerospace industry. Q: how to find number of unique users active in given month I have a table in SQL Server that has'started_date' and 'ended_date' columns. The records contain the user names and the respective dates when they first joined and left the network. I need to find how many users were active in any given month. How do I get this count? A: Create a CTE to use for your data: with mycte as (select user, date_column, count(1) as cnt from mytable where date_column between'somevalue' and'someothervalue' group by user, date_column) select cnt from mycte This uses a CTE to keep your data in a format that you can easily work with. If you have other columns in your table that you want to consider when grouping, you could create a group by statement instead. Note: there is a huge caveat about the data, though. Do not use it for making policy decisions. If you are doing this as a performance test, you'll want to use data that approximates your current data. For example, you can compare July of last year to July of this year. Don't compare September of last year to September of this year. Development and validation of the Escherichia coli Escherichia coli Yeast Starvation and Caution Protocol. The Escherichia coli Yeast Starvation and Caution (ESC) protocol was developed and validated for rapid and efficient identification of genes conferring starvation resistance or sensitivity, and general caution sensitivity or resistance. Phenotypic, gene-specific DNA sequences and mutants of the Salmonella enterica serotype Typhimurium strains LT2 (STM), SL1344 (SL) and SL1344 ΔatrA (ΔatrA) were used for the validation of the method. In addition, variants of the Escherichia coli strain W3110 ΔatrA were created using the same methods to validate this background strain for the method. The gene-specific DNA sequences of 40 and 38 genes conferring E. coli and Salmonella STARVATION or ESC sensitivity or resistance, respectively, were used to validate the protocol. The genes were tested for specificity of the method using mutant alleles and multiplexed analysis of the mutants. Phenotypic microdilution (PMD
