

A. - All SARscape features are fully supported starting from ENVI 5.1. ... data (eg RADARSAT-2 precision beam) is better than 5 meters?... I'm using ENVI 5.1. I'm also using ENVI 5.4 which doesn't have SARscape to support it. ... ENVI 5.5 has this... (Note: ENVI 5.5 does not support SARscape. See Attachment.) If you are using ENVI 5.5, you must select the "SARscape" option from the "Sample radiosity" menu. This will add "SARscape" to "Sample radiosity" in the menu. In ENVI 5.4 this option has been disabled. (That was my question.) I found this link clearer so I will continue to work with ENVI 5.5. This may help others.
