Axis, Axis 2 and Axis 3, with JAX-RS is a open source software

architecture for developing

client/server RESTful web services.

It's part of JSR 311, JSR 339, and

JSR 299. It uses JAXB annotations,

or equivalent tools for XML and other data formats, that are provided by JDK 6 and above. This software includes support for JSON, JavaScript Object Notation, XML, and other formats. Axis has already been working with the JSR-299, released in November 2005, and is now ready for the JSR-339, that has been released in February 2007. For JSR-311, the version released in February 2006, there is still on-going discussion. Axis Jersey provides a simple RESTful web application container. Download

this software by clicking on the download link below. Axis JAX-RS requires both Axis and Axis Jersey to be installed in the server, to allow the project's server to run. Axis JAX-RS is released under the MIT license, we recommend downloading the latest version of Axis, Axis 2 and Axis 3, with Twitter's Streaming API allows a third-party application to retrieve real-time, up-to-the-minute public information from Twitter. The API is useful for Twitter applications, however, it has a wide potential user

base. Axis Streaming API allows the ingestion, processing, and presentation of the Twitter streaming API. The project also provides documentation and classes for the creation of applications that retrieve real-time information from Twitter. Axis Streaming API is released under the Apache Software License Version 2. Download Axis Streaming API here. The Apache Axis

Axel Framework PDF Generator creates PDFs from an HTML or XML template. It provides syntax for producing PDF from OpenOffice templates. Axel Framework takes XML/HTML, converts it into PDF and provides

all the required icons for the PDF header and footer. There is a predefined set of pages that can be used to create a PDF. Besides, there is also a set of predefined controls to define the settings of the document. There are options to add and remove sections, and to highlight some particular parts of the page. In addition, the functionality to display the text in any language is supported. Besides, the images can be kept as images or converted into bitmap. Modifications and developments are

being made continuously and you will always be able to keep updated with the latest version.
