[NewTableName] I get errors with error message: Incorrect syntax near 'TableName' How to do it correctly? A: You need to qualify the name by the schema you want to operate on. RENAME [dbo].[TableName] to [NewTableName] becomes RENAME [SchemaName].[TableName] to [NewTableName] But you don't want to operate on the entire dbo.TableName. You want the exact table name, which is dbo.TableName, and even that can't be replaced because it's not a legal name. If you want to operate on a table named TableName, then you can do something like RENAME [Schema Name].[dbo].[TableName] to [NewTableName] Q: Allocation failed when creating an instance of an Azure Function from code I'm creating an Azure Function using code and not using the portal. However, I get the following exception when
