AutoLISP is one of the few AutoCAD programming languages to have undergone consistent maintenance and development since its introduction in 1991. It has several advantages over other programming languages, including a simple command-line interface, dynamic objects (and arrays), and object-oriented features. It also has many support tools to make working with AutoLISP easier. AutoLISP is normally used to do programmatic scripting of basic drawing commands, but is not intended for more complex programming. AFLIB AFLIB is the AutoCAD Library Extension Language. It is based on the C/C++ library Autodesk Developer Studio Library, and is designed to provide a common programming language for all AutoCAD Add-on products, and also to provide a means for writing applications that can be used with other AutoCAD products.
