The idea behind AutoCAD was that the user would be able to design an entire building on a single screen. The first drawing created in AutoCAD is the first drawing of the first layer. In the beginning there were two people involved: Max Solovitz, the founder of Autodesk, and Peter Fetterman, a physicist and expert in 3D graphics. Together they came up with the idea of creating a graphics application that was easy to learn and use. At the time when this product was invented, the first laser printers had just become available. As computer monitors were much more expensive than the laser printers, it was not a popular product. In 1987, the company started to market the software product as CAD and was renamed Autodesk. AutoCAD was first made available in the

United States, Canada, and the United Kingdom. AutoCAD is now used by over 50 million users worldwide. It is the most successful general-purpose computer-aided design (CAD) software application for two-dimensional drafting, visualization, and design. In an interview with Autodesk, Aras Prunehazi, who is the current CEO of Autodesk, described how he got involved with AutoCAD as a young engineer at the software company: "There were five of us; I'm the fourth. The three guys who were there when I started were primarily electrical engineers; the guy who worked for me was a mechanical engineer. So I came from that space. I was with Autodesk for about eight years. And my first week at Autodesk, I'd literally gone home to the United States from a trip to China. I arrived, and they did an intro class. I went home for the weekend, and I came back the following Monday, and they said, 'You're a member of the team.'" He went on to say: "But it was an interesting time for Autodesk. It was in the early 80s. In 1982, [Autodesk founder] Max Solovitz was in his 40s. It was an interesting time. It was a time when Autodesk was a startup. They were three people. They had about \$15,000 in the bank. They were using scissors to draw 2D diagrams on the front of their office door." The first version of Auto

Mike's elevated homocysteine level can be a precursor to cardiovascular disease. Elevated homocysteine levels are usually accompanied by other risks factors, such as a low vitamin B12 level, hypercholesterolemia, or diabetes.
