B-12 is a third-person action-platformer with randomized levels and relentless robots with plasma cannons for hands. It is inspired primarily by Mega Man X and modern rogue-lite shooters, although the mechanics differ somewhat from both of those. While various weapons and gear can be equipped, the style and depth of the game lean toward arcade minimalism rather than full-on RPG complexity. B-12 is geared toward speed-runners and those who like to play in short sessions. The mechanics are simple. Find and activate three switches in each of the 12 levels to power up the next teleporter. There are four groups of three levels with each group introducing a newer and more powerful generation of Brantisky robots. Can you make it to the final challenge and defeat 'evil' B-12? Fighter Creator is an easy to use, but extremely powerful platform that allows users to design their own fighters in order to create a truly unique experience. Build from scratch to create your fighters, stages, and game modes. A wide variety of items can be included in your fighters like Health, Special Attacks, Weapons, and even add game modes. Characters and stages are stored in Scene Files, allowing for easy copying and pasting to other projects. You can even easily share your creations with the community. Fights are represented graphically by hitting blocks that are destroyed when hit. STEPS TO BUILD YOUR FIGHTERS AND GAME MODE Create an Arena by adding Music and Character Environments to the stage editor and letting the script system generate titles for your stages. Once your creations are set up go to the other menus and customize the project to suit your needs. Now that your arena is ready you can create your fighters by dragging and dropping your sprites into the character editor and adding special abilities and weapons. Once your fighters have been built save and adjust them as you see fit to help you define your gameplay. Now that you have all of the required pieces you can set it up to test out your fighting game by starting it up and creating the different game modes, now all that is left to do is watch the scene play out. You can now choose between the Ground Battle option or the Head to Head mode. Ground battle mode: Players take charge of up to 16 tanks, artillery or aircraft on each map. Players take the control of the tank's commander, driver, and gunner and navigate the map by ground and air units. They use the artillery system to support tank and infantry units, They move the tanks via the use of the Homing Beacon.Q: Why choose between IList and list in .NET Framework Why don't use just a List in framework?. I mean, why there is IList and List? A: List is the most generic one. You can add and remove the items and can't be sure that they are of the type Object. IList is more specific. You can't add anything to it and you can't remove an item. You can add, remove and get a reference to an item. Let's say I have a List. I can do: Person p1 = list1.First; Person p2 = list1.ElementAt(0); p1.Gender = "F"; But this would not be possible with IList. The reason is to provide flexibility. Now you can change the implementation of the list to use arrays or arrays of lists. For example, you can have a list of People where each Person object also has a Job and you want to be able to remove employees from their job.
