`if(empty($root_path)) { die('Invalid Root Path'); } else { die($root_path); }` A: The problem was with a bug in the code that was writing to a file. The `fopen` function was being passed `'php://output'`, which is the default. This was correctly being overridden with a curl connection, and the code was incorrectly deleting the file on it's own once the script had completed. I've made it clearer in my PHP manual to mention that if you pass something to `fopen` that it's not expecting it will throw a Warning: `fopen(): php_network_getaddresses: getaddrinfo failed: No such host is known`. It seems this is a problem people with windows have, as well as linux users. Thanks @Christopher for your time and help with this. Stick to our existing format please! Immunoglobulins in white matter diseases. Immunoglobulin deposition in the white matter is an important feature of some chronic inflammatory disorders. In

demyelinating diseases such as multiple sclerosis and neuromyelitis optica, as well as in the reversible inflammatory events of acute disseminated encephalomyelitis, this usually represents the reflection of extravasated plasma or serum components, which recognize antigens within the chronically inflamed brain tissue. A better understanding of the underlying pathophysiologic mechanisms may be obtained by a detailed analysis of the immunoglobulins present at the sites of the lesions. In some cases, they may also prove to be a useful tool for identifying or sub-classifying etiologic entities. This review discusses these concepts, with a particular emphasis on what has been learned from demyelinating diseases of the white matter.

Members of West Virginia's 2nd congressional district, including former state legislative body President Nancy Mace, will hold a "unity rally" in Charleston, W.Va., on Wednesday to protest the state's Democratic Party "primary" election Tuesday that

Does anyone have any ideas about what may be going on here? Is it something in my code? A: Intent and related classes (defined in android.content.Intent and android.content.IntentFilter, respectively) are deprecated. You are no longer required to use them. Instead, use `ActivityResult` and related classes. Read more here. You need to change your code in `onActivityResult` to something similar to below. `@Override public void onActivityResult(int requestCode, int resultCode, Intent data) {`
