legends, but their shadowy and dangerous land of shadows. Born from the failure of the “Elden Child” and a system whereby one who wields the power of life and death essentially controls the lands, the Lands Between are the battlegrounds where heroes and villains fight for the ultimate power. From the fields to the grand forests to the thrilling mountains, every corner of the Lands Between can be a stage for a thrilling battle. Every enemy that crosses your path will be immersed in a war of strength and cunning, and the heroes you meet on the way will help you play the situation out.

Create the personality of an Elden Lord and build your own adventure. A brand new story unfolds where players train their characters up to three times with frequent main story events. With existing content divided into tiers, each tier offers a potential leveling experience where players will require a certain amount of time and play to be able to achieve. Along with main story events, players will also be able to visit villages, trade, form a party, fight bosses, and enjoy a competitive system where players can work together.

A cyberpunk-style open-world battle system. In contrast to typical RPG battle systems, the face-to-face battles of the Lands Between do not rely on weapon accuracy and have a unique set of moves and evasions. Vast open environments allow you to freely move around and use the environment. When you fight, attack and block will appear in your field of vision, allowing you to directly execute combos and environmental effects while dodging attacks from your enemies at the same time.

**Q: Simultaneous drag or drop of multiple fragments in Android I'm trying to develop a simple Android app where a user can drop multiple fragments of the same type in order to make the fragments "stacked" one on top of the other. The fragments should be**

draggable without losing the state of the previous fragment. Is there any example of such an app? I've found out that such functionality is already provided by the `FragmentManagerAdapter` if I correctly understand the blog post that mention it. But I would like to have a single instance of a fragment (corresponding to a screen) instead of each fragment having its own view. Maybe using "cancelable" fragments is the solution? However, I have no idea how to achieve this.

**A:** The way i got this working was to use `ViewPager`. I created a custom layout with a container View and the `ViewPager` inside it. Then I set up the `ViewPagerAdapter`, managed each item, stopped the view's `onInterceptTouchEvent` and then passed the touch event to the `ViewPager`. All the fragment's children all needed to have the same `onTouchEvent` handler. I provided a mouse click handler for the container View in order to highlight the selected item.

The classic luncheon menu with soup, salad and a main entree is not only delicious, it's very healthy too. Just like many vegetable based soups, this robust soup also gets some of its nutrition from vegetables in the broth. Chicken stock is the usual base for this soup, but you could use vegetable or beef stock instead. You'll have to adjust your serving size accordingly. **Fetal cardiac MRI and MRI-guided fetal intervention: evolving techniques. Fetal cardiology and fetal interventional cardiovascular research have evolved in parallel for over a decade. Fetal heart imaging has the potential to change clinical care of the fetus and neonate. The effect of exposing the fetus to ionizing radiation is yet to be elucidated. Fetal cardiac MRI is rapidly evolving and now frequently used for diagnosis of fetal congenital heart disease, the evaluation of other congenital heart disease, investigation of fetal interventions, and characterization of early ventricular function. The application of fetal MRI also allows better estimation of the actual risk of in utero fetal interventions, provides more accurate information for postnatal care and counseling and reduces exposure to ionizing radiation. This article discusses advances in fetal cardiac MRI and MRI-guided fetal intervention techniques./**\* MIT License
