Hamid Shirvani’s 1997 book The Urban Design Process, is one of the first to have systematically addressed the theme of urban planning from a design process perspective. Not much remains of its discourse, but even so, it is instructive today as regards the conceptual framework in which the reader is led to reflect on the development of the city. The author also takes the time to remind us that, in spite of the urban design process’s long history, modern urban design has yet to master the basic strategy of urban planning, i.e., to make a city capable of permanent life in dynamic relation with nature. Urban Design Process Explored From A Process Perspective For this contribution, Urban Design Process, the author uses a series of carefully selected charts to explicate the urban design process, which begins with the land-use policy scenario and takes us on a journey along the seven paths and levels of the evolution of the process. In one section devoted to basic concepts and theories, the author’s main idea is to introduce the reader to the key elements of urban design and urban planning in a way that will result in the emergence of a creative and dynamic view of the city. We find here an overview of the historical basis of the subject, a survey of recent developments in the field, a brief explanation of the concepts of functionalism, modernism, and capitalist-democratic planning, and a historical overview of the process of urbanization. The various process elements are examined, according to their levels of the planning process, that is, from the initial process to the implementation process and the final process. A well-thought-out, systematic overview of the urban design process, this work must be taken into account as a text book in the field of urban planning and urban design, as an academic course in the field of urban planning and urban design, and as a reference text for practicing architects. What makes the contribution original is not so much that it has devised a new mode of operation for planning the city but rather that it has systematically and objectively put forward a vision of planning, as well as a process for its implementation. Moreover, the author’s approach offers a promising new perspective from which to analyze and plan urban development. A well-thought-out, systematic overview of the urban design process, this work must be taken into account as a text book in the field of urban planning and urban design, as an academic course in the

University of California, Los Angeles (UCLA).Pages Wednesday, June 26, 2016 Reading update How are you? I hope your summer is going well and you're seeing lots of sunshine and happy days. I am. This is what we're swimming in today: Yes. And how did I get here? To be honest I did little reading this week, but I did plan ahead and keep a few books waiting for me to read on the sofa. After all, there's nothing like a long lunchtime break to be enjoying a novel - especially one that's only a few pages long. I'm currently reading Lovers of Liberty by Emma Hooper. (I wrote about it a few weeks ago) It's a historical romance and I think I expected it to be a little more, well, romantic. I was wrong. For the most part I really enjoyed it, but it's not a fast read, like my love of romance novels would have me believe! Anyway, that's how it is. I'll be back next week with a little more reading, and hopefully I will have my own story to share with you.Elementary school teaches kids to code Elementary school students in Ontario, Canada are getting a crash course in programming thanks to a pioneering program that promises to revolutionize the way kids learn to code. The "Computer Science in the Elementary Classroom" program has just launched at Petawawa Junior Public School (PJPS), located just outside Ottawa. It teaches kids how to code by building robots and creating apps that learn and respond to the class members' input. "One of the things that happened when I arrived was that the big computers were all out, the projectors all out, everything was d0c515b9f4
