Intracranial pressure in orthotopic heart transplantation: analysis by the cerebroventricular puncture method. Cerebrospinal fluid (CSF) pressure has been measured continuously for 18-24 hours following orthotopic heart transplantation (OHT) using the so-called 'cerebroventricular puncture' (CV) method. We analysed this in 31 patients, aiming to evaluate intracranial haemodynamics during the acute phase of transplantation. CSF pressures were obtained simultaneously from a carotid artery and, after a short delay, from a lateral ventricle. CSF pressure was recorded every 10 minutes with intracranial pressure (ICP) values >20 mmHg defining a state of brain dysfunction. The CSF pressure and ICP patterns were classified as normal, low, high or rising. The incidence of intracranial hypertension (ICP > or = 20 mmHg) was 60% (18/31). In the majority of patients (17/31), CSF pressure was Q: How can I change the time format in Maple? I would like to change the default time format that Maple 15 displays: The default time format I have right now is 'standard clock', but I'd like to have something like: 'dutch hour' or 'dutch minute'. How can I accomplish this? Thanks in advance! A: I am not sure that you can change the time format using the menus, but it is possible using commands: maple -> programming -> symbolic -> commands -> time format print You can enter a command like: timeformat("dutch hour") A list of possible formats is shown when you enter the "print" command. and Levitt aren'
