AutoCAD is made up of two components: AutoCAD Architecture and AutoCAD Mechanical. AutoCAD Architecture provides a variety of tools to create 2D and 3D architectural and engineering designs. AutoCAD Mechanical provides a variety of tools to create 2D and 3D mechanical drawings. AutoCAD Architecture: The base for AutoCAD Architecture is the drawing tool. It is divided into six sub-tools: Drafting Tool – create 2D drawings. Convert and Reference Data Tool – import data into AutoCAD, such as images, tables, objects, and other AutoCAD objects. Datum Table Set (DTMS) – tables with dimensions that are imported into the drawing to show point, line, angle, and arc coordinates. Graphics Tool – can import graphics, such as images, surfaces, splines, and groups, as well as convert and edit images. Manipulate Objects Tool – manages AutoCAD objects, such as panels, windows, points, lintels, polylines, and polygroups. Statistical Tool – to calculate the percentage, mass, and volume of the objects. The last four sub-tools can be found under the sub-tools menu or by using the F11 command. AutoCAD Architecture can be used to create 2D and 3D architectural and engineering drawings. AutoCAD Architecture also includes other tools to import, move, resize, and group objects. It includes tools to manage user preferences and objects that are hidden and can be displayed in different sizes. AutoCAD Architecture has a variety of tools to create and manage users, teams, templates, and company objects.
