Sunrise: survival Free Download Dietary patterns and risk of colorectal cancer in Italy: the EPIC cohort. High intakes of fat and red meat have been suggested to increase the risk of colon cancer in several studies, but this has not been consistently shown in the case of colorectal cancer. We evaluated the association between two dietary patterns identified in a case-control study of colorectal cancer and the risk of this cancer. Based on information on diet and other lifestyle factors collected at baseline by means of a self-administered food frequency questionnaire, we identified two dietary patterns using principal component analysis: a "traditional" pattern and a "western 6d1f23a050
