Sigmanest.Crack- Sigmanest.9.1.full.crack.The present invention relates to a solid-state image sensor employing a micro LSI process. An image pickup device employing a solid-state image sensor for picking up an image of a subject is generally subjected to a white balance adjustment so as to display a white object or a natural color, as seen from a predetermined reference, in a black or white display state. An iris also generally undergoes white balance adjustment. As a reference for white balance, the average value of luminance values of four pixels located at four corners of an image pickup area is employed, for example. In this case, a photoelectric conversion unit of each pixel is made up of a photodiode and an associated charge holding capacitor. For example, a CCD image sensor employs photodiodes of a general photodiode structure. Meanwhile, a back-illuminated CMOS sensor is known as an image pickup device of such a white balance adjustment structure. This CMOS image sensor is generally made up of an active pixel portion employing transistors as pixels and a peripheral circuit portion for driving the active pixel portion. The active pixel portion is made up of a photoelectric conversion unit and a holding capacitor. A PIN photodi c6a93da74d
